

Creative Director: Seri

Designer: Jake

Minor Details that I've mentioned during the meeting

- rather than left and right composition that's already been used in the Books subpage, try up and down composition, (after the image, line breaks and the texts come after)

- In About Life subpage, maybe scale the images about two times more or even bigger.

Remember that the tone should be not only cheerful, but also profound as it is informational.

- Add some images to influences and Legacy page

***Additional Detail!**

- I think there's too much texts right now. You can take some out (even 50% could work better)

- Try to play with the width of the section

- There are no variations to the font sizes, so think about that as well! middle font or different font-weight, etc

- Consider the RESPONSIVENESS of the page! especially Homepage is the most important page to figure out how the composition would have to change when the page shrinks.
